

Rota-Loo 650, 950, Maxi

The Rota-Loo's unique design incorporates a turn-table of six, wedge shaped, removable compost chambers. When the 'in service' chamber becomes full the turntable is rotated and the full bin remains inside the system to continue the composting process. This process is repeated for one full cycle of the turntable, by which time the contents of the initial chamber will be well and truly composted and ready to be used on the garden or buried.

Rota-Loo 650:

The smallest of the Rota-Loo units is the 650. This unit was designed for use in holiday homes with only one toilet pedestal and for homes with minimal clearance.

Price: \$1795 (plus freight)

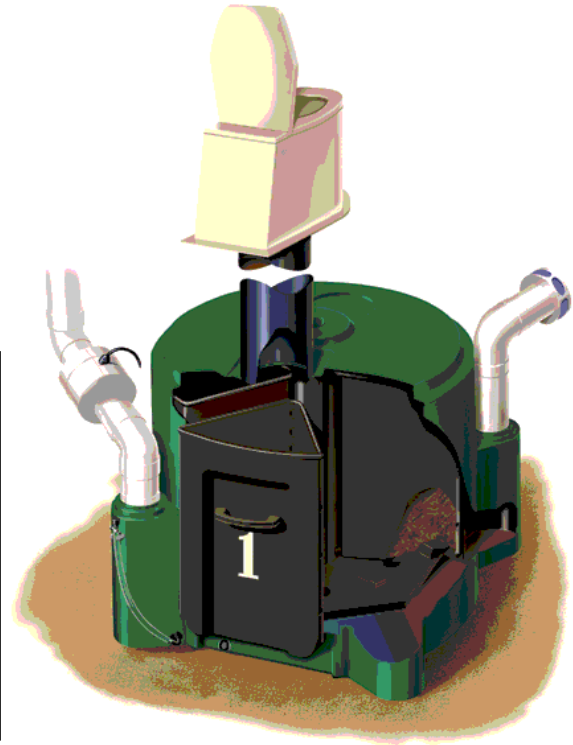

Capacity: 3-4 people

Rota-Loo 950:

The largest domestic Rota-Loo is the 950. The Rota-Loo 950 has more than twice the capacity of the 650 but is only 30cm taller. For continuous use we always recommend the Rota-Loo 950 first. The 950 has the capacity to take two pedestals on the same unit.

Price: \$4950 (plus freight)

Capacity: 6-8 people

Rota-Loo Maxi:

The huge capacity of the Maxi 2000 makes it particularly suitable for public toilet facilities in environmentally sensitive areas. This unit is usually housed in specially designed buildings (diagram on left). These buildings can either be manufactured in Kit-form or constructed on-site by our builders.
